

Health & Recovery Report

Month: 2026-07 | Generated on: 2026-07-17 | Data Status: Demo Mode - Local Mock Telemetry

Monthly Average Readiness	Sleep Score	Resting HR	HRV
68%	78/100	54 bpm	62 ms

Readiness / Recovery Trend (Last 14 Days)

Weekly Narrative Summary

Weekly Health Score: 63/100 (Balanced)

Sleep insights: You slept an average of 7.4 hours per night (Sleep Score: 73). This is lower than your monthly baseline (78). Accumulated sleep debt is currently estimated at 0.9 hours. Suggest aiming for 30 minutes more sleep per night.

Recovery and Autonomic indicators (HRV): Your readiness/recovery score averaged 63. Average HRV was 57ms (monthly baseline: 62ms). Your HRV has dropped below baseline. This suggests sympathetic nervous system dominance, likely due to fatigue, light illness, or physical strain.

Workout activities: You logged 2 workouts this week. Solid effort. To see long-term physiological adaptations, try to schedule at least 3 active training sessions next week.

Stress & oxygen levels: Weekly stress levels averaged 33 out of 100, and SpO2 levels held strong at 98.3%. Stress indicators show a healthy balance of active engagement and passive recovery cycles.

Weekly Suggested Focus: Focus on **Active Recovery**: Prioritize sleep, light walking, and mobility work. Restrict high-intensity workouts until HRV recovers.

■ Month-Over-Month Totals

- Total Step Count: **270,168 steps**
- Total Active Energy Expended: **76,720 kcal**
- Combined Average Heart Rate: **54 bpm** (Resting)
- Baseline Heart Rate Variability (HRV): **62 ms**
